

BLASTABLE ADHESIVE TAPE

You'll Love This Stuff!

PhotoBrasive® B.A.T.™ (Blastable Adhesive Tape) is an entirely new concept of adhesion. Designed specifically to replace toxic, messy and ultimately costly spray adhesive while simultaneously addressing the need for a consistent, durable, peel-able adhesive, PhotoBrasive's patented B.A.T. has fundamentally improved the photo resist abrasive etching process. Try B.A.T. with any PhotoBrasive film product and you'll be reminded that from the simplest ideas come the greatest discoveries.

"We're using B.A.T. in our production and love the strong adhesion and easy clean-up. This is great stuff..."

*-Rod Stoakes, Production Manager:
Waterford Crystal*

"The new B.A.T. is quick, easy and inexpensive. It's cut down blast time on tough substrates like brick and sandstone and makes clean-up a breeze. Everyone here loves it."

*-V. Grabam, Production Manager:
Endicott Enterprises,
Palm Desert, California*

B.A.T. Blastable Adhesive Tape

blastable object. B.A.T. can be applied either to your substrate or directly to the photo resist film. B.A.T. does not require multiple spraying or brushing adhesive applications and drying times. One application of B.A.T. does the job!

How it works Cut a piece of B.A.T. to a size slightly larger than the application area. Apply the adhesive side of B.A.T. to your substrate or pre-made stencil using a hard rubber squeegee. Once applied, remove B.A.T.'s paper backing to reveal the uniform adhesive coated area. It's that simple!

B.A.T. works on a variety of substrates including glass, crystal, acrylic, marble, granite, slate, brick and much more. Whether applying to your substrate or to the film, B.A.T. gives you even blasting results, a durable bond and eliminates messy liquid spraying applications ultimately speeding up the entire photo resist process.

PhotoBrasive® is proud to bring innovative and affordable products to the sandcarving industry.

Blastable Adhesive Tape

- **Excellent for hard-to-stick to surfaces**
- **No messy liquid adhesive - Eliminates spraying**
- **Consistent thickness - even blasting results**
- **Quick, easy application**
- **No fumes and no drying**
- **Environmentally safe**

B.A.T., developed for the decorative sandcarving industry, is a water soluble sandblastable adhesive coated onto a special transfer paper. It is used to bond a pre-made photo resist stencil to a sand-
